HELP FINISH THE BATCH • LOCK IN BATCH 2

Mid-Stream Workshop Recruitment Drive for Jon-Air rev8 Workboats

CALL FOR MID-STREAM BUILD VOLUNTEERS

Production on the pilot cohort of Jon-Air rev8 mini-airboats is underway! As life events and schedules change, mid-stream build slots have opened up. We are calling on skilled trades, fabricators, and micro-contributors to jump in, complete remaining fixed-estimate tasks on the current batch, and bank guaranteed equity credits for the upcoming Batch 2 production run.

1. IMMEDIATE OPENINGS ON THE CURRENT BATCH LINE

Tasks on the active batch are pre-evaluated in our Master Build Guide. Volunteers can step into specific open modules based on their skill sets:

OPEN TASK MODULE	SKILL REQUIRED	FIXED HOUR VALUE	IMMEDIATE WORK OBJECTIVE
Hull Armor & Riveting	Drilling, Countersinking, Fitment	15 Hours / Hull	Mounting continuous UHMW bottom armor plating across remaining hulls.
Stringer Grid Fabrication	MIG / TIG Aluminum Welding	25 Hours / Hull	Tack and structural weld internal 6061 aluminum hull reinforcement ribs.
Rotax 850 Rigging	Small Engine Mechanic / Electronics	20 Hours / Hull	Mounting engine stands, reduction drives, and wiring engine harnesses.
Steering & Console Controls	Mechanical Assembly / Cables	12 Hours / Hull	Installing stick-steering linkages, throttle cables, and instrument dash.

2. WHY STEP IN MID-STREAM?

Immediate Hands-On Shop Access

Work side-by-side with experienced boat builders, welders, and Everglades hunters on an active assembly line without waiting for a new batch cycle to start.

Proven Prototype Validation

The prototype has cleared all 5 testing gates (Structural, Stability, Flotation, Electrical Code, and Registration Readiness). You are assembling a proven, field-tested design.

3. THE FIXED-HOUR CREDIT LEDGER

Every hour of labor contributed to finishing the active batch is immediately logged into the LLC Master Ledger under your name. Your earned credit is protected under the LLC Operating Agreement and automatically converted into a pre-funded deposit toward Batch 2 ownership.

THE BATCH 2 ROLLOVER ENGINE

How Micro-Contributions Turn into Guaranteed Next-Batch Ownership

4. DUAL BENEFIT: HELP NOW, OWN NEXT

Under Article IV of the LLC Operating Agreement, micro-contributions logged during mid-stream recruitment unlock immediate and long-term benefits:

1. Lock-In Priority Position

Micro-contributors who help finish the active batch get first priority in the Batch 2 Queue. As soon as Batch 2 material funding is reached, your position is secured.

2. Capital Credit Rollover

All logged task hours convert at the fixed hourly labor credit rate, directly reducing the out-of-pocket cash required for your Batch 2 boat build.

5. MICRO-CONTRIBUTOR COMPENSATION OPTIONS

Upon completion of the active batch, micro-contributors can choose how their accrued ledger balance is applied:

COMPENSATION OPTION	MECHANISM	IDEAL PARTICIPANT
Batch 2 Ownership Lock-In	Roll 100% of earned ledger hours into a full or shared vessel slot for Batch 2.	Future boat owners building up equity over time.
In-Kind Gear & Parts Payout	Redeem credits for spare UHMW cuts, light bars, custom oars, or marine hardware.	Casual volunteers wanting quality Everglades gear.
Fleet Time-Share Hunt Days	Trade credits for scheduled hunt shifts using the LLC shared reserve workboat.	Hunters needing boat access without full ownership costs.

6. THE ROLLING QUEUE ACTIVATION THRESHOLD

> **HOW BATCH 2 LAUNCHES**
>
> Batch 2 production launches immediately once a single founder (or a co-op group of micro-contributors) reaches 100% of material funding + one boat's worth of labor pledges. By banking your mid-stream build hours today, you accelerate the start of Batch 2 while reducing your future investment requirement!

7. HOW TO JOIN THE SHOP CREW

Step 1: Check Open Modules

Review the active build schedule and select open tasks matching your skills (welding, wiring, assembly, or general shop help).

Step 2: Sign Operating Agreement

Sign the LLC Participant Addendum to protect your logged hour credits and confirm liability waivers before stepping into the shop.
